VehicleManager Enterprise

Transforming license plates into leads

License Plate Recognition (LPR) data alone solves nothing. It is only with analysis that it can reveal patterns, trends and association which generate leads and assist you in enhancing safety and operations. VehicleManager Enterprise is a vehicle location intelligence solution that builds upon the basics of LPR with patented, powerful analytics to help your team instantly transform license plate recognition data into actionable insights.

Find vehicles in no time

Enter a partial and complete license plate and easily search for, find and review the location history of a vehicle of interest and determine where it may be located in the future.

Prevent unauthorized access

Create watch or authorization lists of vehicles that are allowed on site and receive immediate notification if an unauthorized vehicle arrives. Share lists across multiple sites, that way everyone is in the know.

Uncover organized crime groups

Find vehicles that regularly travel together or are often parked next to each other to help identify vehicles associated with crime groups.

Add a layer of backup

Enhance public-private collaboration by sharing your data with law enforcement agencies. The police will be alerted in real-time if a vehicle on their watchlist appears at your facility.

Stay in control

Maintain control over all of your data. Select the duration for data retention to ensure its availability whenever required.
